

OUR ENVIRONMENT: ACTIONS NOT WORDS

1. Development of environmentally friendly substrates and consumables.

All consumables used are evaluated for their environmental impact. We supply plain & printed biodegradable and compostable materials and are the only supplier of wood cellulose self adhesive material to the NZ market. Paper is sourced from sustainable responsibly managed forests (FSC) and recyclable paper labels will be on offer soon.

All our corrugated boxes are made of 80% recycled paper. We are committed to developing our compostable products.

2. Reduction in energy consumption.

We have changed to using only low energy and fluorescent light bulbs. Automatic door closing has reduced the amount of air-conditioning required. Heating units are thermostatically and time controlled. Computers are set to automatically turn off at night. We research and select energy-efficient plant and equipment. The fleet purchase decisions criteria have been amended for higher rating on CO2 emissions.

3. Waste minimisation and recycling.

In the factory there is a recycle program in place for plastic film/wrap, paper, cardboard and polystyrene. Solvents, chemicals, inks and oils go into drums and the solvents are recovered through separation. The logistics of a recycling programme for the recovery of PET liner is being investigated.

Paper recycle bins have been installed in our offices and we are using e mail instead of posting whenever possible. Printing is set to automatic double-sided and toner cartridges are recycled.

Jenkins - giving you
the leading edge
in eco labelling

jenkins group

enviroSense™ self adhesive labels are compostable under ambient temperatures meaning they will disintegrate in a natural (home) composting environment or aqueous environment. The film is manufactured from renewable wood pulp (cellulose). Jenkins are now able to offer white and silver face stock options in addition to clear, making label design options parallel to conventional materials.

enviroWrap™ is a non adhesed customised printed wrap label offering identical compostable properties as enviroSense™, developed primarily for the beverage market as an alternative to plastic wrap.

Earthcycle

Earthcycle has used the design brilliance of nature to develop innovative sustainable packaging made from a renewable resource, called palm fiber, which composts turning into a healthy contribution to the soil.

The Earthcycle range includes packaging solutions for Fresh Produce Packs, Food Service Packs, Fresh Meat, Poultry and Seafood Trays. Custom Solutions are available upon request.

Our eco range all carries certification to both European and American composting standards and are sourced from sustainably managed plantations carrying either FSC (Forest Stewardship Council) or PEFC (Pan-European Forest Certification).

NEW
TO THE
NZ MARKET

Enviro-Mark® NZ

Jenkins Group has made a commitment to undertake responsible environmental management.

We have commenced participation in the Enviro-Mark NZ programme, a health, safety and environmental management system through Landcare Research and were awarded Bronze certification earlier this year and now have our sites on Gold.
